Timezone

Customizing

Timezone

Because of the increasing demand to use CAS products internationally, customers need timezone features so that they can work together across the different timezones. This includes functionality for the correct processing and depiction of activities such as appointments and tasks.

The time zone capability does sometimes result in differences in the way information is displayed in some areas. The date and time fields contain values taken from the time zone you selected.

The time displayed in a time stamp is taken from the application server.

At a glance

- Time zone capabilities allow cross-border working.
- Appointments are displayed in the daily and weekly views of the time zone being used.
- Cooperation and collaboration are improved by using CAS genesisWorld for international project.
- All of the following activities are time zone enabled: appointments, tasks, processes, holidays and phone calls.
